

Text for Ifra-Expo edition (DD 34/2008)

Felix Böttcher GmbH & Co. KG

Worldwide leading manufacturer of rubber covered printing rollers, printing chemicals and printing blankets, we will present on the IFRA 2008 exhibition the GATF prized Chameleon rollers for combined Coldset-UV-applications in newspaper printing. These rollers are characterized by excellent resistance to the most various UV and conventional inks, combined with excellent dynamic properties. As system supplier, we will present also balanced washing agents and fountain solutions for newspaper printing, e.g. our product range of filterable washes and Böttcherin Lavanta, a micro emulsion for the washing units of the newest generation. Apart from our fountain solution additive BöttcherFount N-1004, we will present also the Böttcher Molex device for the fountain solution sector. This device will fight effectively contamination through microbial growth in the fountain solution cycle, without any addition of biocides.
