Form Dampening Roller UV Printing, Mixed Mode Printing and Hybrid Printing

 Form dampening roller for the use with UV inks

Application

-  Good and even dampening properties
-  Good resistance to conventional, hybrid and UV inks and to respective washing agents
-  Good resistance to fountain solution additives
-  High ageing resistance

Features

-  In case of very aggressive UV inks for printing on foils, we recommend a swelling test prior to their use. Please contact your Böttcher consultant.
-  The use of aggressive washing agents can reduce significantly the service life of your rollers.

Note

-  Very good geometrical stability despite varying contact media
-  Little expenditure for roller setting
-  Very stable dampening
-  Reduced waste paper on print start
-  Stable print process

Benefits
